

European Research Council
Established by the European Commission

exchange

www.exchange.ics.uminho.pt

Goals

EXCHANGE's ambition is twofold. First, to provide a comprehensive picture of the transnational DNA data exchange in the EU. Second, to develop a comparative study involving the Netherlands, Poland, Portugal, Germany and the United Kingdom. The ultimate goal is to explore how forensic geneticists attribute meanings to controversial domains of social control of 'suspect populations' and the resulting implications for citizenship and democracy in the 21st century.

Expected results and public impact

EXCHANGE means to stimulate an interdisciplinary dialogue between the social sciences and forensic genetics, and a public debate on the role of science and technology in surveillance apparatuses. The expected results aim to impact the governance and policy-making related to transnational cooperation in criminal investigation and broader security issues.
